Art Unit: 2837

UNITED STATES DEPARTMENT OF COMMERCE
Patent and Trademark Office
ASSISTANT SECRETARY AND COMMISSIONER OF PATENTS AND
TRADEMARKS
Washington, D.C. 20231

Paper No:05112004

Serial Number: 10/615430 Filing Date: July 7,2003

- 1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. It should be brief but technically accurate and descriptive, preferably from two to seven words. See 37 CFR 1.72(a).
- 2. The drawings are objected to because the blank rectangular boxes and/or merely numbered boxes of figure 2 must be labeled. Conventional features disclosed in the description and claims, where their detailed illustration is not essential for a proper understanding of the invention, should be illustrated in the form of a graphical drawing symbol or a labeled representation (e.g., a labeled rectangular box). see 37 CFR 1.83(a). It is further pointed out that merely numbering the boxes is not considered an appropriate label. This allows identification of the drawing element without consulting the text of the specification. Correction is required.

Application/Control Number: 10/615,430

Art Unit: 2837

3. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

- 4. Claims 8-11,17-20 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-8 of prior U.S. Patent No. 6612404. This is a double patenting rejection.

None of the elements in the claims 13-16 are present in the dependent claim 12.

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Henderson et al (4054860).

Henderson et al teaches in figures 1-6, a hall effect rotary switch.

Hall effect chips 20 and magnets 26 are placed on face 22 and rotor 24. The surfaces are parallel to each other and rotate.

Application/Control Number: 10/615,430 Page 4

Art Unit: 2837

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Juntunen et al (5679934) and Pfeffer et al (3882337).

Juntunen et al teaches in figures 1-3, a programmable operating panel for an elevator car.

A panel 5 contains and contact-less input display 1 which can be programmed on site-or-remotely-to-either-place-the-buttons in any particular order, change the brightness,—change the shape, provide key functions or display position, direction etc. Juntunen et al illustrates an optical type button but states that capacitive, resistive or inductive etc. can be utilized.

Pfeffer et al teaches a hall effect contact-less switch carried on a plate, biased by a spring and which has a hall generator on an IC chip which can be programmed for different operations. Thus, to utilize a programmable hall effect switch for the switch within Juntunen et al would have been an obvious substitution to one of ordinary skill in the art.

10. Claims 13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Juntunen et al and Pfeffer et al as applied to claims 1,3-7 above, and further in view of Henderson et al.

Henderson illustrates a hall effect rotary switch and Juntunen et al states that any type of switch can be utilized including magnetic. Thus, to utilize a rotary hall effect switch would have been an obvious substitution to one of ordinary skill in the art

Any inquiry of a general nature or relating to the Status of this application or filed papers should be directed to the Group receptionist whose telephone number is (703) 308-0956.

Papers related to this application may be submitted to Group 2800 by facsimile transmission. Papers should be faxed to Group 2800 via the PTO 2800 Fax Center located at Crystal Plaza 4. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 O.G. 30 (November 15,1989). The Group 2800 CP 4 Fax Center Before Final number is (703) 872-9318 or After Final number is (703) 872-9319.

For assistance in Patent procedure, fees or general Patent questions calls should be directed to the Patents Assistance Center (PAC) whose telephone number is 800-786-9199. Assistance is also available on the Internet at www.uspto.gov.

For requesting COPIES of Cited Art, Office Actions or the like, or General Problem solving, calls should be directed to the TC 2800 Customer Service Office whose telephone number is 703-872-9317-or-by-fax at-703-872-9317-

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Salata whose telephone number is (571) 272-2073. The examiner can normally be reached on Monday through Thursday from 6:30 am to 2:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Nappi, can be reached on (571) 272-2071.
